

# Sales Analysis Dashboard Report

# Introduction

- The Sales Analysis Dashboard project is designed to provide deep insights into a company's sales performance, customer behavior, product trends, and regional profitability.
- Using Power BI, various visualizations and analyses were developed to support data-driven decision-making.
- The dataset includes details such as sales amount, profit, discounts, quantity sold, shipping modes, and customer demographics.

# Methodology

The following steps were involved in creating the Sales Analysis Dashboard:

1. **Data Loading:** Imported the dataset into Power BI Desktop.
2. **Data Cleaning:** Used Power Query to remove duplicates, filter records (e.g., orders from 2019), and split columns like Customer Name.
3. **Data Transformation:** Added calculated columns and measures such as Total Sales, Total Profit, Discount %, and Profit Margin.
4. **Data Modeling:** Established relationships between tables for accurate visualization.
5. **Visualization:** Created interactive charts to analyze sales, profit, customer, and regional trends.
6. **Insights Generation:** Interpreted data patterns to derive actionable business insights.

# Key findings and Visualizations

The dashboard contains the following visual elements representing the core KPIs:

- Total Sales by Customer:** Identified top customers driving maximum revenue.
- Monthly Sales Trend:** Analyzed sales performance across months and years to identify growth and seasonality.
- Sales by Ship Mode:** Displayed the proportion of sales by different shipping methods to evaluate logistics performance.
- Profit by Region:** Compared profit levels across regions to identify high and low-performing areas.
- Sales & Profit by Category:** Highlighted categories with high sales and profit margins for better product focus.

- Sales by Sub-Category:** Revealed sub-category performance to support inventory and marketing strategies.
- Sales & Quantity Over Time:** Examined the relationship between sales volume and revenue to understand demand patterns.
- Top 10 Products:** Identified the most sold products to prioritize stock and promotions.
- Sales by City (Map):** Mapped total sales geographically to highlight key markets and potential expansion zones.
- Discount vs. Profit (Scatter Plot):** Showed how excessive discounts reduce profits, aiding pricing strategy optimization.

# Analysis & Insights

- Monthly Sales Trend (Top 5 Customers):** Tracked sales behavior of major customers, revealing seasonal buying patterns.
- Sales Contribution by Region:** Compared sales percentages across regions to identify strong and weak markets.
- Total Profit by Month:** Displayed monthly profit variations to monitor business performance cycles.
- Average Quantity by Category:** Analyzed how product demand differs across categories.
- Sales by Customer Segment (Column Chart):** Compared sales contribution of Consumer, Corporate, and Home-Office segments.
- Average Sales by Customer:** Displayed each customer's average spending to identify key buyers and loyalty potential.
- Cumulative Sales Over Time:** Illustrated total sales growth trajectory, showing consistent increase in revenue.
- Sales by Year & Category:** Compared annual performance across product categories to spot trends.
- Top 5 Products by Profit:** Highlighted most profitable items driving overall business profit.
- Average Profit by Sub-Category:** Evaluated profit efficiency of each sub-category for better product management.

# Analysis and Insights

## Average sales by Customer Name

## Total Sales by Category and Year

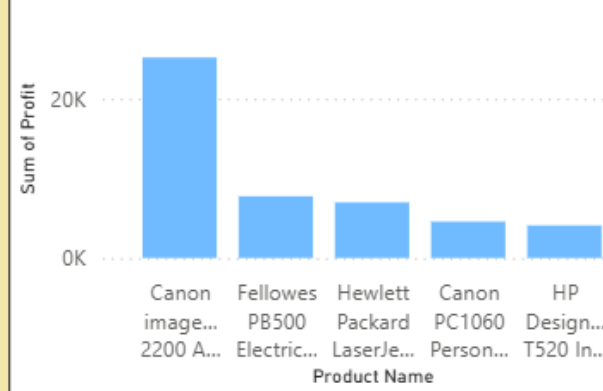

## Monthly sales trend for top 5 customers

## Cumulative Sales by Year

## Top 5 Products by Profit

## Sales by Region

# Other Parameters

- Several additional analyses were conducted using Power Query transformations and DAX calculations:
- Added a sales tax column (10% of sales) to analyze tax contributions per product category.
- Grouped orders by year to calculate average annual sales.
- Created a custom column to categorize sales as 'High' (Sales > 100) and 'Low' otherwise.
- Filtered and compared sales data with and without discounts.

# Insights from Charts and Dashboards

- Total sales show an increasing trend year-over-year, indicating business growth.
- The Technology category contributes the highest profit margin, followed by Office Supplies.
- Central and West regions outperform others in terms of total revenue and profit.
- The Standard Class shipping mode is the most frequently used, accounting for the majority of sales.
- Discounts above 30% significantly reduce profitability, showing the need for controlled discounting.

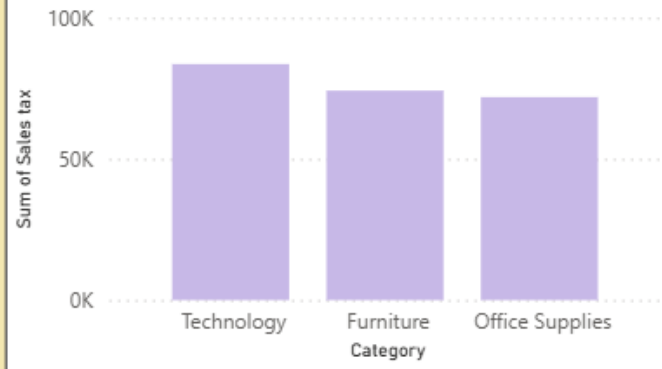

- A small number of high-value customers account for a large portion of sales (Pareto Principle).
- Certain subcategories like Phones and Chairs show the highest individual sales values.
- Sales during the end of the year (November–December) show peaks due to festive demand.
- The relationship between discount and profit is negative higher discounts lead to lower profits.
- Year-over-year analysis shows a steady increase in both sales and customer base.

# Conclusion

- The Sales Analysis Dashboard effectively highlights key trends in sales, profitability, and customer behavior.
- It allows the organization to make data-driven decisions to improve product performance, customer targeting, and discount strategies.
- The integration of Power BI visualizations enables easy monitoring of KPIs and identification of business opportunities.
- Through this analysis, the company can enhance its strategic planning and achieve sustainable growth.
